PERMISSION TO USE

In presenting this thesis in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor(s) or, in their absence, by the Dean of the Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to University Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or to make other use of materials in this thesis, in Whole or in part, should be addressed to:

Dean of the Graduate School
Universiti Utara Malaysia
06010 UUM Sintok
Kedah Darul Aman

ABSTRACT

The Internet has dramatically changed the ways both employees and employers think about job opportunities, The major benefits of Careers Online is the ability to reach a large number of job seekers at low costs, resumes can be checked and matches made more quickly. This study focused on development of a job search portal, a poor link between job portals frustrates job seekers in their job search and this project aimed at developing an easy to use portal. The applied design software engineering methodology was adopted and the job Finder was made of a simple design, high quality graphics and basic functionality and easy to use by users. The result from the development of the prototype portal was also discussed using screenshots from the prototype that was developed.

ACKNOWLEDGMENTS

"In the Name of Allah the Most Gracious and Most Merciful"

First and foremost, I am forever indebted and thankful to Allah for his blessings without which the whole would not have been possible.

I will always be especially thankful to my supervisor A Ms. Rafidah Bt Abd Razak, for her guidance, patience and faith in me, she was always positive, supportive and encouraging, she fostered my academic growth by challenging and inspiring me to reach deeper, to learn more, to expand my viewpoint, and to think critically. Yet, she allowed me to express my views openly and to disagree even when I was wrong.

The final and the most important acknowledgment are owed to my dear father and my dear mother and my uncle (Sohaiub) who enlightens my life, to my sisters and my brothers.

CHAPTER ONE

1.0 INTRODUCTION

The online services are a set of standard technologies that allow applications to expose and consume functionality independent of operating system, programming language, and hardware. Online job portal is a search engine help the employees to search job and employers to post a job. The number of job postings and job searches is increased as the expansion in job market. Until 2006 there are 6,000 jobs online board competing to get the attention of employees and employers, and the number of the site stile grow but in user's minds, there is just a handful (Cramer-Krasselt, 2006).

Internet usage has been growing rapidly in recent years, especially in many developing countries and regions where more and more people are getting access to the Internet. Seventy three percent of households had access to the Internet in 2004 and (58%) and (28%) of adults used the Internet at home and work. The growing use of the Internet for recruiting purposes has opened up an entirely new dimension in online service to search a job (Stevenson, 2008).
